Project Title : Vulnerability Scanner for Web Applications

Abstract

This project aims to develop a tool that automatically scans web applications for known security issues such as SQL Injection, Cross-Site Scripting (XSS), Cross-Site Request Forgery (CSRF), directory traversal, and insecure server configurations. The scanner will simulate attack vectors and analyze server responses to determine potential weaknesses. It provides a detailed report of detected vulnerabilities along with recommended mitigation techniques.

This system is built using Python and leverages open-source libraries like Requests**,** BeautifulSoup**,** and OWASP ZAP API. It includes a simple user interface for initiating scans and reviewing results. This tool is particularly beneficial for web developers, ethical hackers, and QA teams during the software development lifecycle.

The project highlights the importance of automated security testing and contributes to the broader goal of building a safer web environment.

This is system include four modules, User Interface Module, Crawler Module, Scanner Module, Report Generator.

Tools & Technologies Used:

- **Frontend(Design) :** Python Tkinter (or CLI interface)
- **Backend(Database) :** SQLite or CSV for scan logs

Approval Committee

Internal Examiner Deputy Director -CDOE Director -CDOE

Sample

Format Specifications:

1) Font Name : Time New Roman

2) Font size : 12

3) Line space : 1.5 “

4) Alignment : Justified

5) Title : Bold (14 Size)

6) Page : Abstract (Maximum 1 page) and ER diagram (Maximum 1 page)

7) File Type : PDF File (single file only)

****** (All Learners send the Abstract as a Single pdf file only) ******
