Project Title: MaatriCare

Abstract

Pregnancy involves regular appointments, daily care, personal records, and communication with healthcare professionals. MaatriCare is an authenticated web application that brings these activities into one workspace. It supports pregnancy profiles, appointments and visit questions, daily wellbeing, a private symptom journal, milestones, educational resources, summaries, emergency contacts, and reminders. Users control report content and may share selected summaries through revocable, time-limited links. The React and TypeScript frontend uses a Java Spring Boot REST backend with JWT security, JPA, and relational storage (MySQL locally; PostgreSQL configuration). Optional Web Push uses Asia/Kolkata schedules and requires VAPID keys and HTTPS. MaatriCare organizes user-entered information; it does not diagnose, recommend treatment, or replace professional or emergency care.

Tools & Technologies Used

Frontend (Design): React, TypeScript, Vite

Backend (API): Java, Spring Boot REST

Database: MySQL (local), PostgreSQL configuration

Security / Testing: Spring Security, JWT, H2

Approval Committee

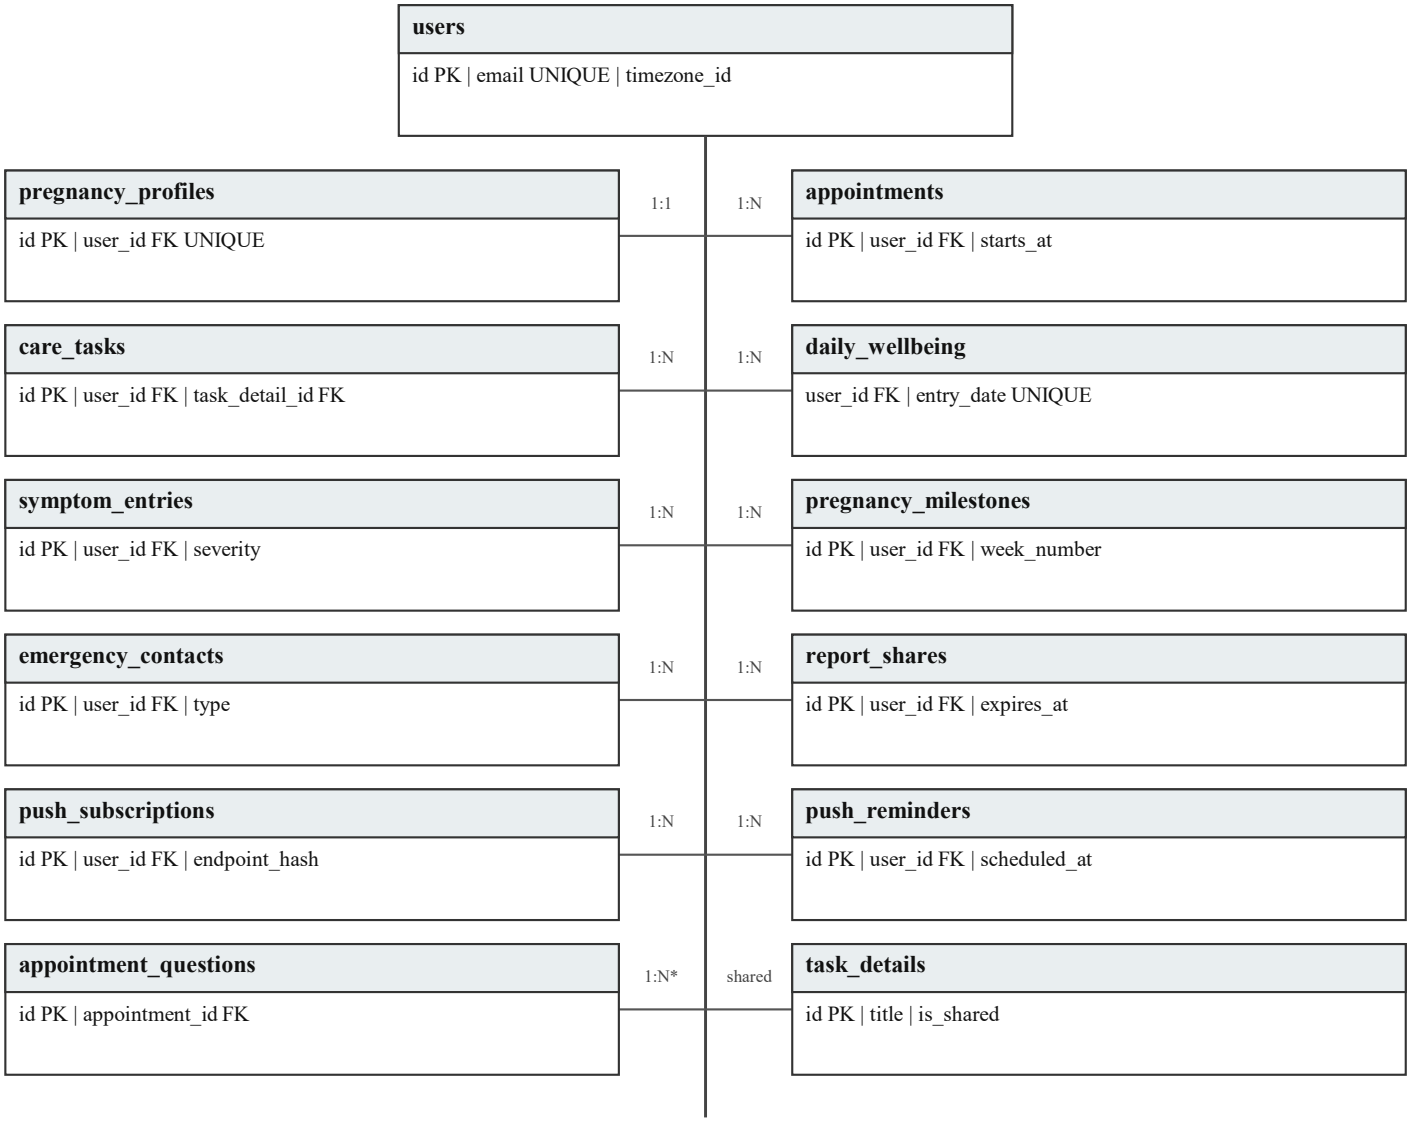

Internal Examiner	Deputy Director - CDOE	Director - CDOE

ENTITY RELATIONSHIP DIAGRAM (ER)

MaatriCare - simplified implemented relational schema

Relationships: one user has one pregnancy profile and may have many appointments, tasks, daily records, symptoms, milestones, report shares, push subscriptions, and reminders. Appointment questions reference appointments; care tasks reference shared task details.
